

# New Products Presentation-67300 series

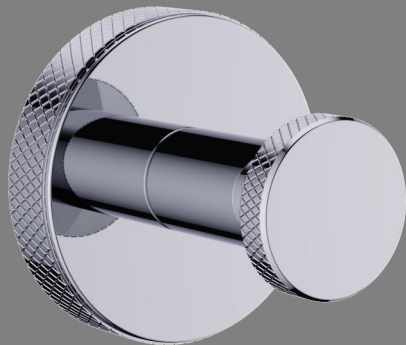

# Design Feature:

This design combines a large circle and a small cylinder, enhanced with knurling, to create a bathroom fixture that balances aesthetics and functionality.

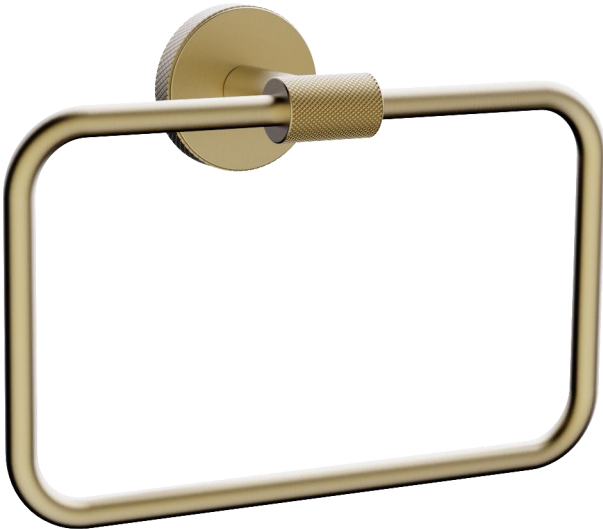

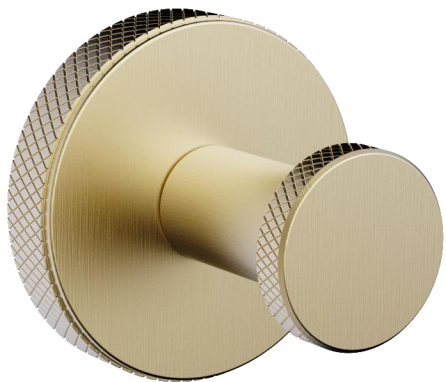

**Core Elements:**  
**Large Circle:** Represents the infinite flow of water and the serene, harmonious atmosphere of the bathroom. Its smooth, expansive form evokes a sense of calm and fluidity.

**Small Cylinder:** Symbolizes precision and control, serving as the functional element (e.g., faucet handle or shower control). Its vertical structure adds elevation and contrast to the circular base.

**Knurling Application:** The large knurling on the circle not only enhances grip but also creates a striking visual texture, adding depth and modernity to the design. Its bold pattern complements the smoothness of the circle, balancing aesthetics with practicality.  
**Small Knurling (on the cylinder):** Focuses on practicality, providing a secure grip for precise adjustments. The finer texture complements the cylinder's compact form, ensuring both elegance and usability.
